

PM-10 Monitoring Data

Number of 24-Hour PM-10 Exceedance Days in Maricopa County and the PM-10 Nonattainment Area

Notes:

- The Native nation monitors are not included.
- To attain the 24-hour PM-10 standard, there can be no more than three exceedances of 154 micrograms per cubic meter over a three-year period per monitor.
- The Arizona Department of Environmental Quality began flagging exceptional events in 2004.
- On July 19, 2007, the exceedance at the Buckeye monitor was not associated with the exceptional event that also occurred on that day.
