

Cleaner Air, Better Health

We are investing in a variety of strategies and technologies to continue improving our region's air quality and conform to federal regulations.

Our Plan:

- Includes a multimodal investment package; MOMENTUM funds non-motorized transportation infrastructure and continues our investments in alternative modes like ridesharing and transit, reducing vehicle emissions and enhancing quality of life for our residents.
- Invests in air quality measures so the region can do its part in curbing climate change.

We heard that equity and environmental considerations were clear motivators among youth and underserved populations. We're ensuring our plan doesn't leave anyone behind, and we're focused on improving health, safety, and livability outcomes for all.

FAST FACTS

The American Lung Association states:

The burden of air pollution is not evenly shared. Poorer people and some racial and ethnic groups are among those who often face higher exposure to pollutants and who may experience greater responses to such pollution. //
